

DURA-lite™ Glass-Backed Natural Stone

Using state of the art manufacturing processes, DURA-Lite™ translucent glass-backed natural stone panels are a thin layer of natural stone laminated to a glass substrate, allowing light transmission. Extracted directly from stone quarries, the stone is custom chosen for each project.

Custom choices of endless varieties of stone
Available in onyx, alabaster, marble, travertine and granite
-Varying colors and characteristics within all above types
Precise bookmatching
Custom thickness and size per project
Knife miter or quirk miter corners

thin: transmit light

Laminated with permanent bond between stone and glass/acrylic backing
Overall thicknesses ranges from 5mm to 2 inches
Stone layer as thin as 1 mm
Thin stone allows for more translucency
Minimizes hot & cold spots as compared to dimensional stone

large panels: minimize seams

Large panel sizes (depending on stone selection)
Cleaner finished look
Less seams / grout lines
Less structural elements needed
Eliminate shadow lines
Better book-matched panels

lightweight: reduce structure and install

1/3rd the weight of dimensional stone
3 times as strong as same thickness dimensional stone
Less structural elements needed
Less weight = less costly shipping
Less weight = less costly installations
Faster installation times
