

WAFER-STONE™ 100% Natural Thin Stone Veneer

Ultra-Light, Ultra-Durable Stone Panels

WAFER-Stone™ is a layer of natural stone veneer bonded to aluminum honeycomb reinforcing that yields a stone panel actually stronger than the original stone itself. Offering all the durability of natural stone, without the installation headaches that thick heavy natural stone panels provide, strong WAFER-Stone™ panels handle with ease and make difficult and costly installations simple. Available in onyx, granite, marble, limestone, sandstone and dolomites.

- 100% natural stone veneer/laminate
- Rigid lightweight fiberglass honeycomb backing
- Waterproof and fire-resistant
- Pre-finished edges
- Available from 3/8" to 1 1/4" thickness
- As low as 3 lbs./sq. ft.
- Simple installation: easy to cut in the field
